

## **AMENDMENTS TO THE SPECIFICATION:**

Please replace the Abstract with the following paragraph:

The present invention relates to a method,~~software program~~, and system for managing access to information and the transfer thereof. More particularly, the present invention relates to a method,~~software program~~, and system for managing, via ~~the Internet~~ at least one intermediary server, access to information and the transfer thereof.

Please insert the following new paragraph at line 1 of page 2 (immediately preceding the “BRIEF DESCRIPTION OF THE DRAWINGS” section):

### **BRIEF SUMMARY OF INVENTION**

In one embodiment the present invention provides for granting a user access to information. More particularly, in one embodiment the present invention provides for: connecting to an intermediary server using a client processor; transferring client login authentication data provided by the intermediary server to a host server after the user has connected to the intermediary server; and granting the user access to information associated with the host server when the client login authentication data is transferred to the host server.
